Sectors in this report are based on MFS sector classification.

Country and region information contained in this report is based upon MFS classification methodology which may differ from the methodology used by individual benchmark providers.

Market overview

Global Equity performance (%) (CAD) as of 31-Dec-15

Source: FactSet. Region performance based on MSCI regional/country indexes.

Canadian Equity performance (%) (CAD) as of 31-Dec-15

Source: FactSet. Sector performance based on MFS sector classification. The analysis of TSX Composite Index constituents are broken out by MFS defined sectors.

Fourth quarter 2015 Global Equity market review

- With the US Federal Reserve's first interest rate hike in 9 years behind us, divergence in global economies and policies remains a key theme in 2016. A robust labor market, high return on equity and lower input costs have supported a stronger US economy, while central banks in Europe, Japan and China continue to implement accommodative policies amidst weak economic growth.
- Many emerging economies face the headwinds of slower Chinese growth, weak commodity prices, a strong US dollar and rising US rates, while EM currency corrections should help exporters. We believe different emerging economies are driven by different dynamics, and structural changes should lead to a long-term improvement of returns.
- Equity markets remain fair to fully valued. All regions are experiencing downgrades in earnings, but no recession-triggering excesses are visible at this time despite the length of the current expansion cycle and recent volatilities.

Fourth quarter 2015 Canadian Equity market review

- During the quarter, Canadian equities slid -2%, lagging gains by U.S. and European equity indices. Weakness in health care, led by Valeant, offset gains in technology and materials stocks. For the full year, Canadian equities dipped 8%, contrasting the US equity experience as measured by the S&P500, which ended up 22% in CAD dollar terms. In Canada, both the energy and material sectors dragged on index performance, related to a global oil supply glut and further aggravated by growth concerns in China and related emerging markets.
- Lingering weakness in commodity prices risks a sustained hit to capex and employment in Canada, potentially spilling over to consumer services and real estate stocks. This contrasts a stronger U.S. economy, supportive of the first U.S. Federal Reserve rate hike in 7 years.
- In 2015, relative bright spots in Canada were consumer staples, technology and telecom and utilities areas, reflecting a flight to safety and to non-CAD revenue-sourced businesses. These trends look to be intact into early 2016.
- During Q4, negative earnings revisions in Canadian equities reinforced the full year trend, contrasting steadiness for US equities in 2015. Forward price earnings multiples declined, pushing Canadian equities to a deeper discount versus U.S. equities.

Market overview

U.S. Equity performance (%) (CAD) as of 31-Dec-15

Source: FactSet. Sector performance based on MFS sector classification. The analysis of S&P 500 Index constituents are broken out by MFS defined sectors.

Fourth quarter 2015 U.S. Equity market review

- The U.S. market, as measured by the S&P 500 Index, rose during the quarter as the market rebounded from the correction that occurred during Q3. However, lingering concerns regarding the slowdown in China and the impact from the Federal Reserve's first interest rate increase in nearly a decade kept a lid on U.S. equity performance for the full year.
- The U.S. economy maintained its steady growth with GDP coming in at 2.1% for Q3. In general, the labor market continued to improve and inflation remained stable at low levels. Global growth remains unsynchronised as the U.S. is still the growth leader among the major economies. While the Federal Reserve finally raised interest rates in December by 25 bps, other central banks (i.e. ECB, BOJ and People's Bank of China) have upheld their "super easy" monetary conditions.
- In general, the growth style of investing outperformed the value style of investing during Q4, as well as for all of 2015. Higher growth sectors such as technology and consumer discretionary lead the way over more value driven sectors such as energy and utilities.

Fourth quarter 2015 Canadian Fixed Income market review

- The Canadian bond market delivered strong returns during the fourth quarter as Government of Canada yields edged lower across all but the shortest maturities on the yield curve, largely due to softer domestic economic data and further weakening in oil prices. Despite a subdued view of the business cycle, we continue to view the macro backdrop as inconsistent with a global or US recession.
- The Bank of Canada maintained its policy rate at 0.50%, while the US Federal Reserve initiated its first rate hike in close to a decade. Given the soft domestic economic backdrop and the poor outlook for commodity prices, we believe the Bank of Canada is unlikely to follow the Fed anytime soon, especially as inflation pressures remain weak.
- Corporate spreads widened, particularly within lower-rated credit tiers and especially within energy. Given that a lot of pain has already been priced into the corporate bond market, we see very good value in overweighting credit assuming the current backdrop of slow global growth, low inflation, and easy policy remains intact, but we remain selective as the credit cycle matures.

Asset summary

Asset allocation as of 31-Dec-15

MFS' asset mix view

Our asset mix targets remained unchanged in the fourth quarter. Multi-asset portfolios continue to overweight equities versus fixed income with a heavy relative preference for non-Canadian equities over domestic stocks and bonds over cash. The global macro backdrop continues to be characterised by modest global growth, low inflation and excess debt. The scars from the Global Financial Crisis are still apparent in the form of deflationary overtones, most visible in falling commodity prices, a strong U.S. dollar, and the need for ongoing policy stimulus. Global monetary policy remains stimulative and even in the U.S. – where the Fed has raised rates – the path of hikes is expected to be gradual when compared with past cycles. Our non-recession economic view should support an earnings recovery in non-Canadian markets, with Canadian equities expected to continue to lag global benchmarks given the ongoing adjustment to the commodity collapse, valuation dis-advantage and possible further weakness in the Canadian dollar. Within fixed income, attractive valuations in corporate bonds and the lack of a catalyst for a major rise in yields favour bonds versus cash.

Significant impacts on performance – detractors

		Relative contribution (%)
Health Care	An overweight position in Health Care detracted from relative performance as the sector underperformed the broad market over the quarter.	-0.3
Valeant Pharmaceuticals Intl Inc	An overweight position in biotech company Valeant Pharmaceuticals (Canada) held back relative results. The company's stock price suffered after it was reported through several media outlets that the company may have manipulated its revenue recognition through its smaller distributors. Valeant had ownership interest in one of these distributors, Philidor, which added to the speculation that the company had done something wrong. However, Valeant took several steps to improve its reputation, such as terminating its relationships with Philidor, and entering into a distribution agreement with Walgreens for its dermatology products in order to add transparency. Subsequently, the stock price showed signs of recovery toward the end of the period.	-0.3
Financial Services	An underweight position in Financial Services detracted from relative performance as the sector outperformed the broad market over the quarter.	-0.3
Bank Of Montreal	An underweight position in banking and financial services firm Bank of Montreal (Canada) dampened relative returns. The stock rose after management posted above-consensus earnings for the quarter and unexpectedly raised the company's dividends.	-0.2
Utilities & Communications	Stock selection within this sector detracted from relative performance.	-0.3
Enbridge Inc	Overweighting shares of energy delivery company Enbridge (Canada) detracted from relative performance, despite the firm having reported third-quarter results that were above consensus estimates, supported primarily by growth in deliveries on its Lakehead liquids pipeline system, higher storage margins with its natural gas business and higher natural gas and liquids production.	-0.2
Transcanada Corp	The timing of ownership in shares of natural gas and oil pipeline company Transcanada Corp (Canada) negatively impacted relative performance. Despite reporting quarterly earnings that came in slightly ahead of consensus estimates, the company received a significant blow when the US State Department denied their request for a presidential permit to start construction of the Keystone XL pipeline project. Shares of the company traded lower after the news.	-0.2

Significant impacts on performance – contributors

		Relative contribution (%)
Industrial Goods & Services	Stock selection within this sector contributed to relative performance.	0.3
	Stantec Inc Portfolio holdings of global infrastructure and facilities consulting firm Stantec Inc. (Canada) bolstered relative returns during the quarter as the stock price climbed after the earnings release. Stantec declared a regular dividend of \$0.105 per share. Earnings were in line with analyst estimates. EPS and Net Revenue both up year over year, driven by the infrastructure and buildings segments.	0.2
Basic Materials	Stock selection within this sector contributed to relative performance.	0.2
	Ccl Industries An overweight position in labels producer CCL Industries (Canada) aided relative returns as the company posted another quarter of strong performance. Growth in earnings and margin improvements from recent acquisitions were notable factors that contributed to results.	0.4
Individual stocks	Quebecor Inc An overweight position in Canadian telecommunications and media provider Quebecor lifted relative performance on the back of a strong third quarter. The company's sports network, TVA Sports, and the acquisition of film and television services provider, MELS, contributed to healthy sales from the media segment. The company's wireless division saw strong user growth during the period.	0.2
	Canadian Natural Resources Ltd An overweight position in independent crude oil and natural gas company Canadian Natural Resources (Canada) benefited relative results. The stock rose as the company posted above-consensus results for the third quarter, which were largely driven by better North American liquids pricing and operating expense management.	0.2

Portfolio outlook and positioning

The Canadian Equity Core strategy is focused on investing in shares of high quality businesses that either offer above-average growth opportunities or trade at attractive relative valuation levels versus their peers and the market. Portfolio sector positioning is a product of our stock selection-driven portfolio construction approach.

The strategy's sector exposure profile has changed moderately during the quarter, as the ongoing market weakness has generated certain opportunities. We continue to favour the transportation and industrials areas, which encompass the railroads, airlines, machinery, and pollution control industries. A combination of best-in-class operators, high barriers to entry due to pricing power and market position, coupled with attractive valuations are amongst the main reasons underlying our preference. On the other hand, our exposure to retailing names was pared back as a reflection of relatively strong performance of our holdings, and the resulting increase in valuation. We continue to see the underlying business fundamentals as attractive, however the valuation part is keeping us from more fully embracing our best ideas in the sector. Contrary to retailing, health care is an area that has moved up the rankings, where sharp stock price pullbacks have created interesting opportunities for long-term investors, although patience and close scrutiny of the risk profiles is a must, given the recent turbulence.

Conversely, we continue to see a limited number of opportunities in utilities, telecommunications and financial services companies as growth opportunities in our opinion are limited. The theme of fully valued securities, in our opinion, is the dominant presence through most of the companies in utilities and telecommunications areas, on one hand, with major banks offering tempered growth prospects going forward, especially compared to their more recent history. This dynamic, coupled with the ongoing quest for yield in the world of extremely low, and in some cases negative real interest rates, has generated very high valuations and is keeping us from more fully embracing some of the ideas that otherwise meet our quality and management effectiveness criteria.

During the quarter we have repositioned certain holdings in order to better reflect the relative opportunity set. Key trades for the quarter included::

- Within the commodities space, a group that encompasses both materials and energy sectors, we have slightly reduced our defensive exposure, given the strong outperformance of the positions in the portfolio. Most notable trades include a trim to CCL Industries – a speciality packaging business, with the capital partially redeployed to a more cyclical commodity name – Methanex, a Vancouver-based company that is the world's largest methanol producer. We believe that Methanex will benefit from positive developments on the demand side, driven by the commodity's increased use in energy and energy-related products, as methanol helps offset oil imports. In the energy space, we have eliminated our position in Keyera, the Western Canada natural gas and liquids refiner and pipeline operator. After significant relative outperformance, due to its slightly more defensive business nature, the current share price reflects future growth potentially more fully, thus we have decided to reallocate the capital to more attractive opportunities elsewhere.
- Added to our position in Bank of Montreal, one of the few Canadian banks with significant U.S. personal, commercial and wealth banking exposure. Also, in recent years BMO's domestic operation has made significant upgrades to client service and offerings.

Portfolio outlook and positioning

- Trimmed our holdings of Couche-Tard and Loblaw on the back of very strong performance, with the capital partially redeployed into recent additions in the consumer space, namely Burger King – Tim Horton's marriage under the Restaurant Brands International banner, and Gildan Activewear.
- Eliminated the position in Open Text, the global enterprise management software provider based in Waterloo, Ontario. The proliferation of effective "Cloud"-based competitive products threaten Open Text's organic revenue growth and long-term cash flow track record.
- Established two new positions in the utilities and communications area - TransCanada and Rogers Communications. In the case of the pipeline operator TransCanada, the guilt by association effect of collapsing oil prices has pushed the valuation down to very attractive levels on the core operation's solid free cash-flow growth alone, suggesting the company's new projects underway are ascribed negligible value. We believe the market overreacted to a degree, and like the prospects of this defensive play with attractive dividend yield that seems to be well protected. The capital was sourced from Enbridge, where while prospects are attractive, the valuation looks somewhat fuller. As for Rogers Communications, we believe we are finally witnessing early signs of a turnaround and stabilisation, especially in the wireless part of the business, coupled with a decline in capital spending intensity. This, in our opinion, should lead to an improvement in earnings and dividends over the next few years.

Canadian equities are indicated as under-valued in global context with the S&P/TSX now trading significantly lower than the S&P 500 by standard valuation measures. Any stabilisation and recovery in commodity prices now seems farther out given recent geo-political developments, which only reinforces the view that overriding supply/demand dynamics aren't supportive of a return to the commodity super-cycle conditions that prevailed over the past 15 years.

While monetary policy remains very supportive, the precarious consumer and a heavy provincial debt load combined with an export profile which is less leveraged to the US than in previous economic expansions, all weighing on the domestic earnings and valuation outlook. That said, certain companies and sectors within the Canadian market are well positioned for the current macro backdrop; particularly those exposed to lower commodity prices, a strong US economy and a lower for longer interest rate environment.

Through our exposure to high quality companies that are able to withstand potential adverse conditions, we believe the portfolio remains well positioned to perform favourably relative to the market over the long term, regardless of particular stages of the economic cycle.

The commentary included in this report was based on a representative fully discretionary portfolio for this product style; as such the commentary may include securities not held in your portfolio due to account, fund, or other limits.

CERTIFICATE OF PORTFOLIO COMPLIANCE

To the Unit Holders of the MFS Canadian Equity Core Fund

To the best of my knowledge, for the quarter ending December 31, 2015, MFS Investment Management Canada Limited ("MFS") complied in all material respects with the investment restrictions contained in the Offering Memoranda dated January 3, 2015, July 28, 2015 and August 18, 2015 for the MFS Canadian Equity Core Fund. Such certification is subject to the following conditions: (i) MFS' compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the Offering Memoranda.

MFS Investment Management Canada Limited.

Significant impacts on performance – detractors

		Relative contribution (%)
Health Care		-0.9
	Stock selection within this sector detracted from relative performance.	
Valeant Pharmaceuticals Intl Inc	Holdings of biotech company Valeant Pharmaceuticals (Canada) held back relative results. The company's stock price suffered after it was reported through several media outlets that the company may have manipulated its revenue recognition through its smaller distributors. Valeant had ownership interest in one of these distributors, Philidor, which added to the speculation that the company had done something wrong. However, Valeant took several steps to improve its reputation, such as terminating its relationships with Philidor, and entering into a distribution agreement with Walgreens for its dermatology products in order to add transparency. Subsequently, the stock price showed signs of recovery toward the end of the period.	-0.8
Retailing		-0.5
	Stock selection within this sector detracted from relative performance.	
Amazon.Com	Not owning shares of internet retailer Amazon.com (United States) held back relative performance as third-quarter results exceeded consensus. The company's revenue grew 23% year-over-year, driven by continued strength in its wireless services segment and margin improvements across North America.	-0.3
Special Products & Services		-0.4
	Stock selection within this sector detracted from relative performance.	
Fidelity National Information Services	An overweight position in financial solutions provider Fidelity National Information Services (United States) dampened relative performance. The company posted disappointing revenue growth which was affected by foreign exchange headwinds, continued economic softness in Brazil and global macroeconomic weakness slowing down its consulting/professional services business as large banks cut back on spending.	-0.3
Individual stocks		
Microsoft Corp	Not holding software giant Microsoft (United States) hindered relative performance. Shares rose during the reporting period benefiting from solid first quarter results that beat market expectations. Strong growth in the Cloud business, particularly from the Office 365 and Azure product lines, combined with a lower than expected effective tax rate, buoyed investor sentiment.	-0.4
General Electric Co	Not owning strong-performing diversified industrial conglomerate General Electric (United States) held back relative returns. Shares of GE appreciated early in the period following news that activist investor Trian had made an investment in the industrial conglomerate. The company's share price was also bolstered by solid earnings results and progress on a number of items to further simplify its business.	-0.3

Significant impacts on performance – contributors

		Relative contribution (%)
Utilities & Communications		0.4
	An underweight position in Utilities & Communications contributed to relative performance as the sector underperformed the broad market over the quarter.	
	Kinder Morgan Inc	0.2
	Not owning shares of natural gas pipelines operator Kinder Morgan (United States) boosted relative performance. Shares depreciated significantly after current challenging business trends forced the company to cut its annual dividend by 75% during the period to preserve cash. More broadly, weak commodity prices have resulted in terrible equity share price performance for many energy infrastructure companies, including Kinder Morgan, calling into question their ability to rely on the equity capital markets to fund future growth.	
Technology		0.3
	Stock selection within this sector contributed to relative performance.	
	Apple Inc	0.3
	An underweight position in computer and personal electronics maker Apple (United States) strengthened relative results. Shares of Apple slumped during the reporting period despite posting overall positive results.	
	Alphabet Inc	0.2
	An overweight position in internet search giant Alphabet (United States) boosted relative results. Strength in mobile search and video ads on YouTube were notable contributors to the company's above-consensus results for the quarter. Management also announced that it had authorized a stock buyback program which further supported the stock.	
	Avago Technologies Ltd	0.2
	An overweight position in analog semiconductor manufacturer Avago Technologies (United States) strengthened relative returns. The company posted above-consensus returns during the quarter and issued guidance for 2016 that exceeded expectations which likely gave reassurance to concerns over declining smartphone trends and potential order reductions from the company's leading customer Apple.	
Financial Services		0.2
	Stock selection within this sector contributed to relative performance. However, there were no individual stocks within this sector that were among the portfolio's top relative contributors for the reporting period.	
Individual stocks		
	Thermo Fisher Scientific	0.2
	An overweight position in life sciences supply company Thermo Fisher Scientific (United States) benefited relative performance as the company beat third-quarter earnings and revenue consensus estimates with strong growth in both its Biopharma and Chinese market segments.

Portfolio outlook and positioning

After a difficult third quarter, the market was able to rally in the fourth quarter (S&P 500 up over 7%) and end the year up slightly (S&P 500 total return of 1.4%) in US Dollar terms. From a style perspective, growth significantly outperformed value in Q4 and the full year with the Russell 1000 Growth benchmark outperforming the Russell 1000 Value benchmark for the full year by nearly 10%, the widest spread since 2008 and one of the strongest on record. Price momentum was another factor driving returns in 2015, although the relative returns for this factor narrowed as the year ended perhaps suggesting that the price momentum run may be ending. In looking at the portfolio's performance during the quarter, while our underweight to the largest market cap quintile was a headwind, over time our ability to outperform will largely be a function of our ability to identify compelling investment opportunities rather than broad sector, factor, market or economic calls and this quarter several underperforming stocks in health care, notably Valeant Pharmaceuticals, was the primary detractor from relative performance.

While the S&P 500 finished the year up slightly, closer inspection reveals a very narrow market overall with the majority of stocks finishing the year with a loss in US Dollar terms. In particular, the lack of breadth has been notable as the 10 largest stocks by market cap in the S&P 500 outperformed the remaining 490 stocks by over 20% (top 10 stocks up 17.5% vs the remaining 490 stocks down 4.7%), the largest spread since the 1990's. Investors have come up with a variety of names and acronyms to describe this phenomena, for example FANG (Facebook, Amazon.com, Netflix and Google/Alphabet), the five horseman (FANG plus Salesforce.com) or the nifty nine (five horseman plus EBAY, Priceline.com, Microsoft, and Starbucks), but they all demonstrate that the market was led by a limited number of stocks and the outperformance of these stocks was significant (FANG was up over 60%). Common attributes for many of these stocks are that they tend to offer above average growth and on average trade at high multiples compared to the market as a whole (the cap-weighted P/E of FANG is nearly 60x), and the high valuation is why we largely do not own these names. In an environment where growth was scarce it is not surprising that investors gravitated towards these high growth names. The question moving forward is can these companies continue to grow to support the market and their multiples or will we need to see a broadening out to drive the market higher in 2016? Our view is that it will likely take the market broadening out to drive higher returns in 2016.

During the quarter, we continued to search for opportunities across the market, and we added three new positions in the consumer staples sector, which saw the largest increase in relative exposure. Specifically, we added Kimberly-Clark, Mead Johnson Nutrition and Estee Lauder. Kimberly-Clark has improved its asset mix and increased its exposure to high growth categories (away from commoditised consumer tissue to faster growing personal care) and geographies (emerging market exposure increased from mid-teens % of sales 10 years ago to 1/3 of sales today), resulting in more consistent revenue growth that should be above peers going forward. We believe the market is not giving the company credit for its improved fundamentals and view the current valuation discount to peers and risk/reward as attractive. In addition, the company has exhibited shareholder friendly capital allocation returning over 100% of FCF to shareholders over the past 5 years.

Portfolio outlook and positioning

The relative multiple for Mead Johnson Nutrition looks attractive for a leader in one of the more attractive end markets in consumer staples, infant nutrition. MJN also carries a clean balance sheet and we believe the issues in China/Hong Kong are transitory and the new e-commerce initiatives should help. In addition, its valuation is looking increasingly attractive versus consumer staples and we view it as an attractive takeout candidate. Finally, we've long admired Estee Lauder and appreciated the opportunities it has to increase margins with newer management, but it recently came into a valuation range that we considered attractive enough to initiate a position. Estee Lauder is the global leader in prestige beauty and its sustainable, above average organic revenue growth is driven by expanded distribution in faster growing channels and geographies as well as share gains within the overall beauty category.

At the sector level, the largest decrease to relative exposure was in retailing as we trimmed Kohl's and sold our position in Bed Bath & Beyond. While valuation is reasonable, we lost confidence in Bed Bath & Beyond's ability to turn the tide on profit growth as margin pressures from items such as online shipping costs and wage pressures are overwhelming comp growth, which has also slowed due to a lack of traffic drivers and consumers shopping more online.

Elsewhere, post the Hewlett-Packard split, we sold Hewlett-Packard (printer and computer business) given negative top line growth and very little potential for margin improvement and held on to Hewlett Packard Enterprise (services and enterprise offerings) which offers a good balance sheet, M&A firepower, better growth profile and an attractive valuation.

Looking forward, we believe it is extremely difficult to make investment decisions based on predictions around economic growth, interest rates, commodity prices or currency movements. As a result, we build the portfolio stock by stock and we will continue to seek out investment opportunities that can drive strong risk-adjusted performance over the long term. We believe earnings, and the ability of companies to meet or exceed earnings expectations, will be an increasingly important attribute as we move into 2016 and our focus on high quality companies that have the ability to deliver more consistent earnings should serve us well.

CERTIFICATE OF PORTFOLIO COMPLIANCE

To the Unit Holders of the MFS U.S. Equity Core Fund

To the best of my knowledge, for the quarter ending December 31, 2015, MFS Investment Management Canada Limited ("MFS") complied in all material respects with the investment restrictions contained in the Offering Memoranda dated January 3, 2015, July 28, 2015 and August 18, 2015 for the MFS U.S. Equity Core Fund. Such certification is subject to the following conditions: (i) MFS' compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the Offering Memoranda.

MFS Investment Management Canada Limited.

Significant impacts on performance – detractors

		Relative contribution (%)
Health Care		-0.9
	Stock selection within this sector detracted from relative performance.	
Valeant Pharmaceuticals Intl Inc	Holdings of biotech company Valeant Pharmaceuticals (Canada) held back relative results. The company's stock price suffered after it was reported through several media outlets that the company may have manipulated its revenue recognition through its smaller distributors. Valeant had ownership interest in one of these distributors, Philidor, which added to the speculation that the company had done something wrong. However, Valeant took several steps to improve its reputation, such as terminating its relationships with Philidor, and entering into a distribution agreement with Walgreens for its dermatology products in order to add transparency. Subsequently, the stock price showed signs of recovery toward the end of the period.	-0.5
Bayer	An overweight position in pharmaceutical company Bayer (Germany) dampened relative performance. The company's share price declined late in the quarter as investors appeared to have shown concern over the European Medicines Agency's investigation of a trial of the company's blood thinner drug, Xarelto.	-0.2
Individual stocks		
Yum! Brands	Holdings of restaurants company YUM! Brands (United States) detracted from relative performance. The stock's performance was hurt by below-consensus third-quarter EPS as a result of a slower-than-expected recovery in China and China Division same-store sales failing to meet expectations. YUM! Brands performance recovered slightly from the lows after the company announced it would split into two segments, separating the business in China from the other segments, but still underperformed for the quarter.	-0.3
Air Liquide Sa	An overweight position in industrial and medical gas supplier Air Liquide (France) weakened relative returns. Despite management reporting third-quarter revenues in line with market expectations, shares sold off modestly after the company announced a \$10.3 billion takeover of US rival Airgas.	-0.2

Portfolio outlook and positioning

The International Equity strategy is focused on high-quality companies with sustainable above-average growth and returns, whose prospects are not reflected in their valuation.

We continue to favour consumer staples, broadcasting/cable tv, and technology companies. Our investments in consumer staples companies, in general, have strong brands and diverse geographical footprints that we believe should enable them to grow at above-average rates; these companies generally have strong balance sheets, good cash flow generation and attractive valuations. We believe our holdings in broadcasting/cable tv companies are attractively-valued companies with good long-term growth prospects. Finally, within technology, we own several companies that we believe should benefit from an increased penetration of smartphones, and the adoption of tablets, on a global basis.

Within financials, we remain cautious due to our belief that most developed market commercial banks and insurance companies cannot grow faster than global GDP through a full economic cycle. We are also concerned about the increased risks for these companies given the political issues facing many developed market countries' financial systems, and the near-term uncertainty regarding possible outcomes.

There are also limited opportunities to invest in electric power and telecommunication companies, particularly in developed markets. We believe returns and growth rates for telecommunication companies are low because competitive pressures and technological changes generally keep capital intensity relatively high. The regulatory environment for electric utilities remains a headwind due to the fiscal stress of governments globally.

The energy sector continued to underperform the broad equity market as oil prices fell to nearly \$37/barrel at year end, due to increased supplies and a slowing global economy. We remain underweight to the sector as most energy companies are expected to experience weaker free cash flow with lower returns on invested capital. While energy stock prices have declined significantly this year, we believe there is still more downside risk to earnings. As a result, we believe many of these stocks look cheaper on current earnings forecasts than they actually are. We also believe many companies that have weaker balance sheets may struggle to service their debt in the future. Given this challenging backdrop, we continue to monitor the energy sector closely for opportunities. A portfolio holding that we currently favour is Inpex Corporation, Japan's leading oil and gas exploration and production company. We believe Inpex is attractively valued relative to its peers, maintains a strong balance sheet and generates strong operating cash flows. Completion of an important LNG project should also significantly increase production growth for Inpex in the near future.

Key trades during the quarter were modest and included:

Portfolio outlook and positioning

- Initiating a position in Brazilian brewing company Ambev. We believe concerns surrounding the state of the Brazilian economy provided an attractive entry point as the company's valuation was below its global peers, yet the company has higher margins and market share. To fund this transaction, we eliminated our holding in Brazilian financial institution Itau Unibanco due to valuation and longer-term fundamental concerns.
- Adding to our position in Canadian pharmaceutical company Valeant early in the quarter after its stock price fell on concerns regarding the company's drug pricing strategy. While the stock continued to experience downward pressure over the quarter on concerns surrounding its relationship with specialty pharmacy Philidor and health issues for the company's CEO, we continued to believe the valuation was very attractive. While Valeant terminated its relationship with Philidor, it announced late in the quarter a new distributor relationship with Walgreens.
- Trimming our exposure to US automotive components manufacturer Delphi due to the stock being more fully valued and longer-term concerns about continued strong auto sales growth in China and North America.
- Continuing to build our position in global cosmetics company L'Oreal as we believe the company has a proven management team, strong brands across a wide range of price points, and has generated some growth outside of EM markets in recent years.
- Continuing to build a position in Element Financial, a Canadian-based leasing company that has expanded its base of operations the past few years through strategic acquisitions. We believe fleet leasing appears to be a good business primarily because lease payments generally stay ahead of expected amortization, and the carrying cost exceeds the residual values. We believe as the company continues to expand its operations, it can benefit from continued synergies and improving returns.

With the US Federal Reserve's first interest rate hike in 9 years behind us, divergence in global economies and policies remains a key theme in 2016. A robust labor market, high return on equity and lower input costs have supported a stronger US economy, while central banks in Europe, Japan and China continue to implement accommodative policies amidst weak economic growth.

Many emerging economies face the headwinds of slower Chinese growth, weak commodity prices, a strong US dollar and rising US rates, while EM currency corrections should help exporters. We believe different emerging economies are driven by different dynamics, and structural changes should lead to a long-term improvement of returns. We believe identifying EM opportunities is best done from a bottom up perspective – finding companies with solid returns, cash flow, lower levels of debt and strong corporate governance.

Portfolio outlook and positioning

The yen's depreciation has boosted earnings but not export volumes and profitability, so Japanese equities continue to trade at a discount to most other developed markets. While the most recent focus has been around structural reform, we believe the implementation has been more marginal than mainstream. Implementing reforms to increase female participation in the labor force, allowing targeted immigration, and creating reforms in agriculture and other sectors, will take time.

Through our exposure to high-quality companies, we believe the portfolio remains well positioned to outperform the market over the long term, regardless of particular stages of the economic cycle.

CERTIFICATE OF PORTFOLIO COMPLIANCE

To the Unit Holders of the MFS International Equity Fund

To the best of my knowledge, for the quarter ending December 31, 2015, MFS Investment Management Canada Limited ("MFS") complied in all material respects with the investment restrictions contained in the Offering Memoranda dated January 3, 2015, July 28, 2015 and August 18, 2015 for the MFS International Equity Fund. Such certification is subject to the following conditions: (i) MFS' compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the Offering Memoranda.

MFS Investment Management Canada Limited.

[^] FTSE TMX Canada Universe Bond Index

Significant impacts on performance

Detractors	Shorter relative duration	The portfolio's shorter duration posture relative to the benchmark detracted during a period in which government bond yields drifted lower.
	Yield curve positioning	The portfolio's underweight position in bonds with remaining term-to-maturity between three and ten years had an unfavourable effect on relative performance as the middle of the curve outperformed the portfolio's overweight in shorter-term issues.
	Sector allocation	An overweight exposure to corporate bonds at the expense of provincials held back performance as corporate spreads widened by 7bps during the period whereas provincial spreads narrowed by 3 bps.
	Security selection within energy	Bond selection in energy was a detractor, particularly within pipelines.
Contributors	Security selection within financials and infrastructure	Bond selection in infrastructure and financials was an area of relative strength, led by the portfolio's holdings of AA-rated deposit notes as well as maple bonds.

Credit quality (% of total assets) as of 31-Dec-15

The MFS portfolio's quality breakdown is based on MFS' own methodology, which is different from that used by the benchmark provider. MFS has not independently verified the benchmark data.

For all securities other than those specifically described below, ratings are assigned to underlying securities utilizing ratings from Moody's, Dominion Bond Rating Service (DBRS), and Standard & Poor's rating agencies and applying the following hierarchy: If all three agencies provide a rating, the middle rating (after dropping the highest and lowest ratings) is assigned; if two of the three agencies rate a security, the lower of the two is assigned. Ratings are shown in the S&P and DBRS scale (e.g., AAA). All ratings are subject to change. U.S. Government includes securities issued by the U.S. Department of the Treasury. Federal Agencies includes rated and unrated U.S. Agency fixed-income securities, U.S. Agency MBS, and CMOs of U.S. Agency MBS. Other Not Rated includes fixed income securities which have not been rated by any rating agency, and cash.

Portfolio outlook and positioning

The Canadian bond market capped off a solid year of gains in the fourth quarter, as the FTSE TMX Universe index rose 1.0%, lifting the 2015 total return to 3.5%. As has been a recent theme, corporate bonds lagged Government of Canada issues as spreads rose. The main drivers of this risk-off backdrop were the ongoing soft patch in global growth, further deflation in energy and industrial commodities, as well as volatility ahead of the U.S. Federal Reserve's first rate hike since 2006.

As the global economic cycle matures, it becomes more and more apparent that the current expansion is unlike any we have seen in decades. For one, the scars of the Global Financial Crisis have yet to fully disappear as the legacy of debt and deflationary pressures remain and continue to cap economic growth. Moreover, the global economy continues to require extraordinary policy stimulus in the form of easy money, FX intervention, or fiscal measures. Even in the U.S. where the Fed has raised rates, the path of hikes will likely be far more gradual than in past cycles.

The Canadian economy continues to feel the impact of these global macro trends as the sharp fall in commodity prices has eroded the terms-of-trade and the economy requires adjustment. Growth has slowed and debt ratios are well-above trend. Fiscal stimulus from the new government is expected to offer some support but is not likely to be a game changer. With monetary policy already stimulative and diverging from the Fed, the Canadian dollar has declined sharply.

Despite these headwinds, we continue to believe that a global recession will be averted and thus we have made no material changes to our investment thesis. We continue to believe that valuations in the Canadian fixed income market are expensive, particularly in the 3-5 year part of the yield curve which is pricing in a weaker economic outlook than we expect. As a result, we remain below benchmark duration, though this negative duration gap was narrowed during the quarter. Given the widening in corporate bond spreads, we believe the sector is approaching an inflection point given our expectation that we are not entering a global recession and we remain overweight. We have become increasingly selective as the cycle has matured given the macro challenges, but continue to believe corporate bonds offer a margin of safety given our focus on issuers with strong cross-cycle fundamentals.

CERTIFICATE OF PORTFOLIO COMPLIANCE

To the Unit Holders of the MFS Canadian Fixed Income Fund

To the best of my knowledge, for the quarter ending December 31, 2015, MFS Investment Management Canada Limited ("MFS") complied in all material respects with the investment restrictions contained in the Offering Memoranda dated January 3, 2015, July 28, 2015 and August 18, 2015 for the MFS Canadian Fixed Income Fund. Such certification is subject to the following conditions: (i) MFS' compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the Offering Memoranda.

¹ The Average Credit Quality (ACQR) is a market weighted average (using a linear scale) of securities included in the rating categories.

Past performance is no guarantee of future results.

Figure shown reflects Class A 7-Day Yield.

Credit quality (% of total assets) as of 31-Dec-15

The MFS portfolio's quality breakdown is based on MFS' own methodology, which is different from that used by the benchmark provider. MFS has not independently verified the benchmark data. The Credit Quality table shows the percentage of portfolio assets falling within each rating category. Included in each rating category are short-term debt securities, the ratings of which are based on the short-term credit quality ratings of the securities' issuers. For repurchase agreements, the credit quality is based on the short-term rating of the counterparty with which MFS trades the repurchase agreement. Short term securities utilize the rating assigned to them by the Dominion Bond Rating Service (DBRS). Ratings are subject to change.

Portfolio outlook and positioning

A fourth quarter characterized by an ongoing soft patch in global growth, further deflation in energy and industrial commodities, as well as volatility ahead of the U.S. Federal Reserve's first rate hike since 2006 capped off another challenging year for yield-oriented investors.

As the global economic cycle matures, it becomes more and more apparent that the current expansion is unlike any we have seen in decades. For one, the scars of the Global Financial Crisis have yet to fully disappear as the legacy of debt and deflationary pressures remain and continue to cap economic growth. Moreover, the global economy continues to require extraordinary policy stimulus in the form of easy money, FX intervention, or fiscal measures. Even in the U.S. where the Fed has raised rates, the path of hikes will likely be far more gradual than in past cycles.

The Canadian economy continues to feel the impact of these global macro trends as the sharp fall in commodity prices has eroded the terms-of-trade and the economy requires significant adjustment. Growth has slowed and debt ratios are well-above trend. Fiscal stimulus from the new government is expected to offer some support but is unlikely to be a game changer. With monetary policy already stimulative and diverging from the Fed, the Canadian dollar has declined sharply.

The Bank of Canada maintained its key policy rate at 0.50% during the quarter, but three and twelve month Canada Treasury Bill yields rose by 9 and 7 basis points to close the year very modestly above the overnight rate. Given the soft domestic economic backdrop and poor outlook for commodities, we believe the Bank of Canada is unlikely to follow the Fed anytime soon, especially as inflation pressures remain weak. Given the flatness of the yield curve, we have maintained the portfolio's term-to-maturity below that of its benchmark and have preserved a significant position in high-quality corporate and provincial holdings to help boost overall yield.
