Country and region information contained in this report is based upon MFS classification methodology which may differ from the methodology used by individual benchmark providers. Portfolio characteristics are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ.

Market Overview

Global Equity performance (%) (CAD) as of 31-Mar-19

Source: FactSet. Region performance based on MSCI regional/country indexes.

First quarter 2019 Global Equity market review

- Global equity markets have rebounded in 2019 following the sell-off in 4Q18, as the US Federal Reserve reversed its previously hawkish stance due to concerns around a slowdown in US growth and a lack of inflationary pressure.
- There remain concerns around slowing global growth and macro risks (such as Brexit), despite some progress in the US-China trade negotiations.
- Earnings outlook remains challenged, and corporate margins are well above the long-term historical average. Rising labor costs may become an issue for profit margin going forward.

Canadian Equity performance (%) (CAD) as of 31-Mar-19

Source: FactSet. Sector performance based on MSCI sector classification. The analysis of TSX Composite Index constituents are broken out by MSCI defined sectors.

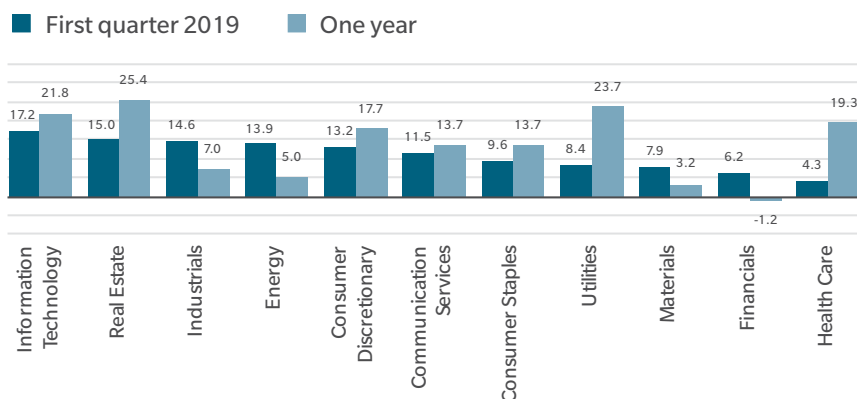

First quarter 2019 Canadian Equity market review

- The Canadian equity market rebounded 13% in the first quarter, erasing the prior quarter sell-off and then some, while moving in lockstep with US and global benchmarks during both periods.
- Gains were universal across all sectors: Notable were Cannabis stocks, up 46%, and technology stocks, up 23%.
- On average the Canadian dollar was stronger than in the prior quarter but trending weaker into quarter-end on softness in the Canadian economic data and persistent trade concerns.
- While one-year forward earnings estimates for the S&P/TSX declined modestly during the quarter, the forward price/earnings multiple rebounded to 14.7x, right back to the 10-year average, essentially capturing the decade since the global financial crisis.

Market Overview

U.S. Equity performance (%) (CAD) as of 31-Mar-19

Source: FactSet. Sector performance based on MSCI sector classification. The analysis of S&P 500 Index constituents are broken out by MSCI defined sectors.

First quarter 2019 U.S. Equity market review

- The US market, as measured by the S&P 500 Index, was significantly higher during Q1. This was a major reversal from the deep sell-off during Q4 2018. Investors used the new calendar year and the continued trade negotiations with China as reasons to push up equity prices.
- While the United States is still posting decent economic growth — GDP of 2.2% during Q4 and 2.9% for all of 2018 — investors are anticipating slower growth in 2019 and beyond. Given generally tame inflation and slowing growth domestically and abroad, the US Federal Reserve declined to raise interest rates in March and signaled no rate increases for the rest of 2019. Despite the Fed not raising rates, the yield curve bounced around from basically flat to slightly inverted toward the end of the quarter. An inverted yield curve has historically made for a more difficult economic and market environment.
- In all three market caps (large, midsize and small), growth outperformed value during the very strong first quarter. During the period, the best performing sectors included technology, real estate and industrials. Health care, financials and materials were the weakest sectors on a relative basis.

Canadian Fixed Income performance (%) (CAD) as of 31-Mar-19

Source for benchmark performance SPAR, FactSet Research Systems Inc. All indices represent total return unless otherwise noted.

First quarter 2019 Canadian Fixed Income market review

- Similar to the final quarter of 2018, Government of Canada (GoC) yields declined in the quarter. The GoC 10-year yield reached a level last seen prior to the first Bank of Canada rate hike in June 2017. The tightening financial conditions and weak Q4 2018 GDP have forced a pause in hikes from the BoC; however, a bias towards higher rates remains.
- The markets, on the other hand, have priced out further rate hikes for the remainder of 2019, as of the end of Q1. The repricing of Canadian rate expectations filtered through to longer-maturity bonds, resulting in falling yields that helped propel Canadian bond returns higher during the quarter.
- Dissimilar to the final quarter, Canadian provincial and corporate spreads moved narrower, retracing about half the move experienced during the end-of-year risk-off move. Corporate and provincial bonds outperformed federal bonds across the entire maturity spectrum. Lower-quality bonds were the top performers.

Previous to June 2017 the benchmark blend was 5% FTSE Canada 91 Day T-Bill, 25% FTSE Canada Universe Bond, 14% MSCI EAFE, 29% BMO/TSX CAP 10%, 27% S&P 500. Index performance is a blend of the two indices.

Asset Summary

MFS' asset mix view as of 31-Mar-2019

The Canadian bond market, as measured by the FTSE Canada Universe Bond Index, returned 3.91% in the first quarter of 2019. As witnessed by a strong rebound across the equity markets globally, risk-on zeal returned to capital markets during the first quarter, following a dismal and volatile conclusion to 2018. Once again, Central bankers around the globe came to the rescue of the markets by providing repeated assurances that they would proceed with caution for any further reduction in monetary accommodation. With this change, risk assets found themselves back in favour, across fixed income credit qualities and asset classes. Unlike risk assets, the rising potential for the reinstatement of accommodative monetary policy, on the back of deteriorating economic data, pushed yields lower. Eventually longer-term rates fell below policy rates, more commonly referred to as yield curve inversion. Government of Canada (GoC) yields declined with the 10-year yield reaching a level last seen prior to the first Bank of Canada (BoC) rate hike in June 2017. Falling yields and tightening credit spreads benefited the entire Canadian fixed income market.

Overall, we continue to expect softer non-recessionary global growth with moderate inflation – the so-called 'goldilocks' environment. However, the risks remain to the downside, as the full impact of tightening measures has yet to be felt. The Q1 rally in risky assets has eroded valuations, with support coming from dovish central banks and heavy inflows rather than an improvement in the earnings fundamentals. As a result, we remain cautious on the medium-term outlook.

We remain broadly neutral on equities within our balanced portfolios, not yet finding the conviction to overweight risk, given the lingering uncertainties. Regionally, we remain modestly underweight Canadian equities versus global equities given that we expect Canadian growth to moderate over the next 6 to 18 months as previous rate hikes work their way through the economy. Within fixed income, we continue to believe that bonds will outperform cash.

Attribution results are generated by the FactSet application utilising a methodology which is widely accepted in the investment industry. Results are based upon daily holdings using a buy and hold methodology to generate individual security returns and do not include expenses. As such, attribution results are essentially estimates and may not aggregate to the total return of the portfolio or of the benchmark which can be found elsewhere in this presentation.

¹ Sector allocation is calculated based upon each security's price in local currency.

² Stock selection is calculated based upon each security's price in local currency and included interaction effect. Interaction effect is the portion of the portfolio's relative performance attributable to combining allocation decisions with stock selection decisions. This effect measures the relative strength of the manager's convictions. The interaction effect is the weight differential times the return differential.

Significant Impacts on Performance - Contributors

| Relative to S&P/TSX Capped Composite Index (CAD) - first quarter 2019 | | Relative contribution [%] |
|---|---|---------------------------|
| Constellation Software Inc/Canada | Overweighting shares of enterprise software solutions Constellation Software (Canada) contributed to relative performance. The company reported a strong quarterly financial metric that was well ahead of consensus. A highlight this quarter was the \$20 per share special dividend, which reflected excess capital generated in the business. | 0.4 |
| Thomson Reuters Corp Eq | A portfolio overweight to shares of Canadian news and professional markets information provider Thomson Reuters buoyed relative returns as the stock price climbed higher during the quarter. Fourth-quarter revenues, adjusted earnings before interest, taxes, depreciation and amortization (EDITDA), and management guidance for 2019 were all in line with consensus estimates. The company also raised guidance for its 2020 financial targets, including revenue growth and adjusted EBITDA margin, which further supported the stock. | 0.2 |
| Barrick Gold Corp | Not owning shares of gold producer Barrick Gold (Canada) positively impacted relative results. The stock came under pressure after the company reported weaker-than-expected operating costs and a higher tax rate. | 0.2 |
| Boyd Group Income Fund | The portfolio's overweight position in auto collision body shop acquirer Boyd Group Income Fund (Canada) bolstered relative results after the company posted strong quarterly results, thanks to acquisitive revenue growth from 86 new locations, an increase in same-store sales growth, driven by strong demand for repair services, progress made on addressing technician shortages and a favourable foreign exchange impact. | 0.2 |
| Bank Of Nova Scotia/The | An underweight position in financial services provider Bank of Nova Scotia (Canada) contributed to relative performance. The company reported disappointing earnings results during the quarter, owing to weak performance in both of its domestic retail operations and capital markets due, in part, to higher expenses. | 0.2 |
| Transcanada Corp | An overweight position in energy infrastructure company TransCanada (Canada) bolstered relative performance. The company reported strong quarterly results that topped expectations on stronger-than-expected natural gas and liquids delivery volumes. | 0.2 |

Significant Impacts on Performance - Detractors

| Relative to S&P/TSX Capped Composite Index (CAD) - first quarter 2019 | | Relative contribution [%] |
|---|---|---------------------------|
| Shopify Inc | Not holding shares of Canadian cloud-based e-commerce platform provider Shopify weighed on relative returns as the stock price increased throughout the quarter. Quarterly revenue and non-GAAP earnings per share both beat consensus estimates as subscriber revenue benefited from platform fees and strong client merchant volumes. | -0.3 |
| Aurora Cannabis Inc | Not holding shares of Canadian medical cannabis products manufacturer Aurora Cannabis detracted from relative returns. The stock price benefited from the announcement in March that the company is bringing on Nelson Peltz as a strategic advisor as it pursues expansion in medical and consumer applications. | -0.2 |
| Transcontinental Inc | An overweight position in shares of media and marketing commercial printer and packaging company Transcontinental (Canada) dampened relative returns. Although the company missed earnings estimates only modestly, the stock declined sharply as investors appeared to have been concerned that the company's business pivot to packaging from printing was hindered by increasingly excessive costs related to recyclable packaging regulation and consumer tastes. | -0.2 |
| Canopy Growth Corp | Not holding shares of Canadian medical cannabis producer Canopy Growth weighed on relative returns. The stock price responded positively to news in early January that the company had received a hemp license in New York, which will be used to establish operations in the US. The company plans to commit upwards of \$100 million to build out a NY-based hemp industrial park. | -0.2 |
| Nfi Group Inc | The portfolio's overweight position in motor coach manufacturer NFI Group (Canada) detracted from relative performance. The company reported disappointing deliveries following delays on transit and accessible buses and weaker-than-expected regular coach sales. | -0.1 |
| Brookfield Asset Management Inc | Not holding shares of Canadian alternative asset manager Brookfield Asset Management weighed on relative returns as the stock price rose throughout the quarter. Strong quarterly results were buoyed by a 10% increase in fee-bearing capital, year over year, as the capital injections of third-party investors continued to leverage core business returns. The asset manager was able to raise its quarterly dividend per share as a result. | -0.1 |

Portfolio Outlook and Positioning

The late 2018 rally in Canadian equities, off the December lows, carried over into the first quarter of 2019. A US Fed-led shift to less restrictive monetary policy, coupled with a large stimulus by Chinese policymakers and a more constructive outlook for US-China trade relations, were largely responsible for the swift and powerful market reversal. On the whole, Canada-specific economic data continued to disappoint this past quarter. Trade data has suffered from the on-going Canada-China international relations crisis, from US-imposed aluminum and steel tariffs, and renewed uncertainty that the new USMCA deal (formerly NAFTA) may be not ratified by the US congress. Further, the SNC-Lavalin prosecution scandal has contributed to negative news flow. Mixed price and sales volume data from the domestic housing market rounded out the challenges to the Canadian economic landscape. One of the few business sectors with good news was energy, on some positive pricing momentum and pipeline transportation developments.

Within the S&P/TSX benchmark, cyclical sectors like technology, industrials and energy outperformed defensive sectors such as consumer staples and communication services. Declining interest rates benefitted utilities and real estate while a flattening yield curve negatively impacted bank stocks, which were a significant drag on the performance of the financial services sector.

At the factor level, growth and price momentum metrics posted strong results while earnings momentum, valuation and quality metrics lagged significantly. High beta stocks, a good proxy for volatility, performed well early in the quarter but produced weaker results in March.

The MFS Blended Research Low Volatility Canadian Equity portfolio slightly outperformed in the first quarter despite a significant headwind from the volatility factor and middling performance from the fundamental and quantitative research inputs. Strong stock selection overall, including some benefit for intersection stocks, offset a negative impact from sector positioning.

While there were not any notable company specific contributors, intersection holdings, which are stocks rated buy by both our fundamental and quantitative research inputs, aided results during the quarter. The quality focused fundamental input to our process produced weak results overall, however, buy-rated technology company **Constellation Software** and information services company **Thomson Reuters** were the most significant individual contributors to performance. The quantitative models produced middling performance with particular weakness in the price momentum, quality and sentiment metrics.

Portfolio Outlook and Positioning

The portfolio's construction process, that utilizes long-term average weights for sectors, negatively impacted results as underweight positions in the health care and transportation sectors more than offset the positive contribution of the underweight positions in the financial services and basic materials sectors. Stock selection overall benefitted portfolio performance with underweight positions in a number of underperforming banks and a lack of holding in gold miner **Barrick Gold** notable contributors. The lack of holdings in high-volatility ecommerce technology leader **Shopify** and cannabis companies, **Aurora Cannabis** and **Canopy Growth**, were notable individual detractors from portfolio performance.

While a number of impediments to economic growth and equity performance have been neutralized or lifted, the lagged effects of tighter monetary policy coupled with a highly indebted consumer and outstanding trade issues suggests the outlook for Canadian economic growth remains challenged. While valuations are generally reasonable, the decline in leading economic indicators suggests a challenging earnings outlook. Additionally, with the flattening yield curve, we would expect the trend in volatility to continue higher over the next 24-36 months. In such an environment, we feel market leadership is likely to lean defensive with large caps, defensive sectors and quality metrics driving performance.

In our view, the Blended Research Low Volatility Canadian Equity portfolio, while maintaining a valuation discipline, should benefit from the quality focus of our fundamental research analysts and the quality factors in our quantitative models. Additionally, the portfolio construction process that seeks to minimize risk by trying to avoid the most volatile stocks in the universe and using long-term average sector weights to diversify should reduce absolute downside risk.

Key trades for the quarter included the following:

- We added **Granite Real Estate** during the quarter. Fundamentally, the analyst believes the company is favorably positioned with strong upside, maintaining the best balance sheet among Canadian REITs. Strong earnings momentum supported the quantitative assessment.
- We bought communications and media company **Rogers Communications**. The analyst views valuation as attractive, especially on a risk-adjusted basis, as the company continues to execute and take market share in the wireless space.

Portfolio Outlook and Positioning

- We sold **Choice Properties** during the quarter, largely to fund the purchase of Granite Real Estate, as the quantitative metrics had weakened on a relative basis.
- Despite attractive quantitative metrics, we exited **Husky Energy** as volatility increased due to potential acquisition chatter as well as headwinds facing the industry.
- We trimmed **Canadian National Railway** as the stock exhibited strength during the recent pullback, allocating to other ideas.

The commentary included in this report was based on a representative fully discretionary portfolio for this product style; as such the commentary may include securities not held in your portfolio due to account, fund, or other limits.

Attribution results are generated by the FactSet application utilising a methodology which is widely accepted in the investment industry. Results are based upon daily holdings using a buy and hold methodology to generate individual security returns and do not include expenses. As such, attribution results are essentially estimates and may not aggregate to the total return of the portfolio or of the benchmark which can be found elsewhere in this presentation.

¹ Sector allocation is calculated based upon each security's price in local currency.

² Stock selection is calculated based upon each security's price in local currency and included interaction effect. Interaction effect is the portion of the portfolio's relative performance attributable to combining allocation decisions with stock selection decisions. This effect measures the relative strength of the manager's convictions. The interaction effect is the weight differential times the return differential.

Significant Impacts on Performance - Detractors

| Relative to MSCI All Country World Index (CAD) - first quarter 2019 | | Relative contribution [%] |
|---|--|---------------------------|
| Walgreens Boots Alliance Inc | The timing of the portfolio's position in shares of drug store operator Walgreens Boots Alliance (United States) weighed on relative returns over the quarter. The stock declined as concerns over reimbursements, slower cost deflation of generic drugs and a weaker flu season appeared to have weighed on investor sentiment and raised concerns that the company may need to lower its full-year earnings guidance. | -0.3 |
| KDDI Corp | The portfolio's overweight position in telecommunications company KDDI (Japan) held back relative performance. The share price declined on the back of slowing profit growth, due to increased competition and weaker prices, and higher investments associated with the introduction of 5G networks. | -0.3 |
| Lawson Inc | An overweight position in convenience store chain Lawson (Japan) weighed on relative performance after the company released a disappointing earnings report. The earnings shortfall was due to a decrease in same-store sales, higher selling, general and administrative expenses and weaker-than-anticipated gross margins. | -0.3 |
| Pfizer Inc | An overweight position in pharmaceutical giant Pfizer (United States) detracted from relative returns. The company reported weaker-than-expected guidance driven by Lyrica's loss-of-exclusivity (LOE) headwind and investment expenses ahead of a new product cycle. | -0.2 |
| Cigna Corp (Eq) | The portfolio's overweight position in shares of global health service organization Cigna (United States) weakened relative performance. The stock underperformed the index during the quarter as investors appeared to have been disappointed with the company's full-year guidance, which came in below estimates. | -0.2 |

Significant Impacts on Performance - Contributors

| Relative to MSCI All Country World Index (CAD) - first quarter 2019 | | Relative contribution (%) |
|---|---|---------------------------|
| Boeing Co/The | The timing of the portfolio's ownership in shares of aerospace company Boeing (United States) bolstered relative results. The share price rose over the first half of the quarter, due to better margins at its Commercial segment, which was attributed to a robust market environment, improving air traffic and strong order intake. However, shares declined toward the end of the quarter, following the crash of Ethiopian Airlines (Boeing 737MAX) and the subsequent grounding of 737MAX flights, globally. | 0.3 |
| General Mills Inc | A portfolio overweight to US branded consumer foods manufacturer General Mills benefited relative returns as the stock price increased during the quarter. Quarterly sales, gross profit, earnings before interest and taxes and earnings per share significantly beat consensus estimates, driven by accelerating price/mix and organic sales growth, as well as expanding gross margins. | 0.2 |
| Store Capital Corp | Holdings of real estate investment trust Store Capital (United States) helped relative returns after the company reported earnings ahead of estimates, driven by lower selling, general & administrative and interest expenses. The company also posted a record acquisition year, which bolstered its revenue outlook for the upcoming year. | 0.2 |
| Starbucks Corp | The timing of the portfolio's ownership in shares of coffee and tea company Starbucks (United States) contributed to relative performance. The company reported solid quarterly earnings, aided by better-than-expected revenues as a result of strong global same-store sales. The management team increased its earnings per share guidance figures for the upcoming year, citing further strengthening of global sales and increased share repurchase activity. | 0.1 |
| Waste Connections Inc (Eq) | A portfolio overweight to Canadian solid waste services provider Waste Connections benefited relative returns. Quarterly earnings results and revenue came in above consensus expectations, driven by better-than-expected net volume growth. | 0.1 |

Portfolio Outlook and Positioning

The late 2018 rally in Global equities, off the December lows, carried over into the first quarter of 2019 driving the MSCI All Country World index to one of its best quarterly returns in history. A shift to less restrictive monetary policy coupled with a large stimulus by Chinese policymakers and a more constructive outlook for US-China trade relations were largely responsible for the swift and powerful market reversal. Despite the more constructive macro developments, the outlook for global growth and company earnings remains in a downtrend reflecting the lagged effects of monetary tightening and the tangential effects of the trade war between China and the US. The slower growth outlook is reflected in Ned Davis's Global Government Bond Yield Curve composite (10 year – 3 month) which has flattened to levels that have historically, since 1985, coincided with very weak returns for global equities.

Within the MSCI All Country benchmark, developed markets outperformed emerging markets with particular strength in North American and Europe ex-UK indexes. German, UK and Japanese equities were significant developed market laggards, while Emerging markets broadly underperformed with notable weakness in the EMEA and Latin American regions.

On a sector basis, cyclical sectors, such as technology and industrials, largely dominated for the quarter overall, however, defensive sectors, like Consumer Staples and Utilities regained leadership in March as yield curves flattened and global growth concerns re-emerged. As would be expected, flattening yield curves weighed heavily on financial stocks which were the weakest sector overall during the quarter. Growth indexes, led largely by technology stocks, continued to outpace Value indexes which are heavily weighted in the above-mentioned financials. Small and midcap stocks generally outperformed large cap stocks for the quarter, however, large caps regained the upper hand in March in line with defensive shift referred to above.

At the factor level, growth and quality metrics posted strong results while valuation, earnings momentum and price momentum metrics lagged significantly. High beta stocks, a good proxy for volatility, performed well early in January but produced more neutral results in the last 2 months of the quarter. This factor performance profile was generally consistent globally with the exception of Japan, where valuation metrics produced very strong performance.

The MFS Blended Research Low Volatility – Global Equity portfolio underperformed in the first quarter due to numerous factors including the strong performance of high volatility stocks, middling quantitative model performance, regional and sector positioning and poor stock selection in a number of isolated sectors.

Intersection holdings, which are stocks rated buy by both our fundamental and quantitative research inputs, aided results with **Boeing**, despite its 737 Max issues, the most significant individual stock contributor to performance. The quality focused fundamental input to

Portfolio Outlook and Positioning

our process produced strong results during the quarter with buy-rated stocks significantly outperforming. As mentioned above, the quantitative models struggled in the first quarter with value, earnings momentum, quality and sentiment metrics all producing moderately negative results. The middling performance of valuation metrics and the strong performance of our quality focused fundamental research input is generally what we would expect given the late cycle market environment.

The portfolio's construction process, that utilizes long-term average weights for sectors and geographies, negatively impacted results as overweight positions in health care and Japanese stocks, coupled with an underweight in the technology stocks, detracted from relative results. Stock selection in a handful of sectors also had a significant negative impact on performance. Specifically, in the US health care sector intersection holdings **Cigna**, **Walgreens Boots Alliance** and **Pfizer** all produced disappointing performance. Additionally, overweight positions in Asian retailers **Lawson** and **Dairy Farm International** also weighed on results. Finally, a lack of holdings in many technology leaders like **Apple** and **Facebook** detracted from performance.

The sustained atypical performance of growth factors also continued to negatively impact relative performance. Growth factor leadership has historically been episodic and not a consistent driver of performance, which is the predominant reason why they aren't included in our investment process. A similar, prolonged period of growth factor leadership occurred during the technology bubble in the late 1990's; the reversal of the factor performance over the subsequent two years was significant. It is difficult to predict the timing of such a reversal, however, we do expect it to occur with a similar outcome.

While a number of impediments to economic growth and equity performance have been neutralized or lifted, the lagged effects of tighter monetary policy, coupled with a number of outstanding macro risks like Brexit and trade negotiations, suggest the outlook for global growth and earnings remains challenged. Additionally, with the flattening yield curves globally, we would expect the trend in volatility to continue higher over the next 24-36 months. In such an environment, market leadership is likely to lean defensive with large caps, defensive sectors and quality metrics driving performance.

We believe the Blended Research Low Volatility – Global Equity portfolio should benefit from the quality focus of our fundamental research analysts and the quality factors in our quantitative models while maintaining a valuation discipline. Additionally, the portfolio construction process that seeks to minimize risk by trying to avoid the most volatile stocks in the global universe and using long-term average sector and region weights to diversify should reduce absolute downside risk.

Portfolio Outlook and Positioning

Key trades for the quarter include the following:

- We initiated a position in pharmacy-led health and wellbeing company **Walgreens Boots Alliance** during the quarter. Fundamentally, the valuation looked very attractive, and quantitative metrics, notably valuation, sentiment and quality, were strong.
- We bought specialty coffee retailer **Starbucks**. Fundamentally, the analyst believes that earnings could grow double-digits over the next few years and earnings momentum, sentiment and quality were very strong from a quantitative perspective.
- We established a position in Japanese-based convenience store operator **Seven & I** following short-term weakness. Quantitatively, earnings and price momentum were attractive.
- We sold aerospace leader **Boeing** during the quarter. Volatility increased over the quarter as the market digested the implications of the 737 Max bans and the stock no longer meets the low-volatility criteria for the strategy.
- We sold electronic educational toy manufacturer **VTech Holdings** during the quarter. Growth has slowed significantly since Toys R Us, a prominent seller, filed for bankruptcy. Additionally, volatility picked up, and earnings momentum and quality deteriorated from a quantitative perspective.
- We eliminated integrated oil company **Exxon Mobil** from the portfolio. The energy industry continues to face headwinds and our analyst has concerns about management's strategy for capital allocation against cyclical pressures. Quantitatively, metrics deteriorated and valuation remained elevated.

CERTIFICATE OF PORTFOLIO COMPLIANCE

MFS Low Volatility Global Equity Fund

To the best of my knowledge, for the quarter ending March 31, 2019, MFS Investment Management Canada Limited (“MFS”) complied in all material respects with the investment restrictions contained in the applicable Offering Memorandum or Offering Memoranda for the MFS Low Volatility Global Equity Fund. Such certification is subject to the following conditions: (i) MFS’ compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the applicable Offering Memorandum or Offering Memoranda.

MFS Investment Management Canada Limited.

Significant Impacts on Performance

Relative to FTSE Canada Universe Bond Index - first quarter 2019

| | | |
|---------------------|---|--|
| Contributors | Sector allocation | An overweight allocation to corporate bonds boosted relative returns. Federal government bonds underperformed the broader index as corporate and provincial spreads tightened during the quarter due to the general risk-on environment. |
| | Allocation to US corporate bonds | The portfolio's exposure to US corporates also positively affected performance, as US bond spreads tightened more than their Canadian counterparts during the quarter's risk-on environment. The spread outperformance was more pronounced in lower-quality bonds, particularly in the portfolio's high yield holdings, reversing last quarter's movement. |
| | Selection in industrials and financials | Security selection within both industrials and financials added value during the period. Holdings of lower-rated industrial bonds and longer-dated bank bonds outperformed peers during the quarter. |
| Detractors | US currency exposure | The portfolio's US dollar exposure negatively affected performance during the quarter as lower expectations for future rate hikes by the US Federal Reserve negatively affected the US dollar. |

¹ The Average Credit Quality (ACQR) is a market weighted average (using a linear scale) of securities included in the rating categories.

² (Lesser of Purchase or Sales)/Average Month End Market Value

Credit quality (% of total assets) as of 31-Mar-19

The MFS portfolio's quality breakdown is based on MFS' own methodology, which is different from that used by the benchmark provider. MFS has not independently verified the benchmark data.

For all securities other than those specifically described below, ratings are assigned to underlying securities utilizing ratings from Dominion Bond Rating Service (DBRS), Standard and Poor's, Moody's Investors Service, and Fitch rating agencies. In cases where the agencies do not agree on the credit rating, the rating is classified according to the following rules: If two agencies rate a security, and the ratings are not equal, use the lower of the two ratings; if three agencies rate a security, use the most common rating; in the rare event that all three agencies disagree, use the middle rating. If four agencies rate a security, use the most common rating; if four agencies rate a security with a two way split, use the lower rating. In the highly unlikely event that all four agencies disagree, consider the three lower ratings applying the three rating methodology rule. Ratings are shown in the S&P and DBRS scale (e.g., AAA). All ratings are subject to change. U.S. Government includes securities issued by the U.S. Department of the Treasury. Federal Agencies includes rated and unrated U.S. Agency fixed-income securities, U.S. Agency MBS, and CMOs of U.S. Agency MBS. Other Not Rated includes fixed income securities which have not been rated by any rating agency, and cash.

Portfolio Outlook and Positioning

The Canadian bond market, as measured by the FTSE Canada Universe Bond Index, returned 3.91% in the first quarter of 2019. Risk-on zeal returned to capital markets during the first quarter, following a dismal and volatile conclusion to 2018. Once again, central bankers around the globe came to the rescue by providing repeated assurances that they would proceed with caution for any further reduction in monetary accommodation. It took until the final month of the quarter for the Bank of Canada (BoC) to tilt toward the more dovish rhetoric, but they too signaled that a pause and cautionary approach was warranted going forward. With this change, risk assets were back in favour across fixed income credit qualities and asset classes, rebounding smartly from the drudging endured only a few months prior. Unlike risk assets, the rising potential for the reinstatement of accommodative monetary policy, on the back of deteriorating economic data, pushed yields lower. Eventually longer-term rates were below policy rates, more commonly referred to as yield curve inversion. Government of Canada (GoC) yields declined with the 10-year yield reaching a level last seen prior to the first BoC rate hike in June 2017. Falling yields and tightening credit spreads benefited the entire Canadian fixed income market.

Looking forward, we continue to expect a moderation in Canadian economic growth. The final quarter of the year barely managed to keep above water, turning out a meagre 0.4% annualized GDP increase. We believe Canada is in the midst of a growth slump. Weaker-than-expected near term economic momentum has emerged, at the same time that energy sector production curtailments are sending growth temporarily lower. We feel the probability of a further slowdown is elevated. The offsetting force for Canada, historically, has often been exports, where a depreciating Canadian dollar and healthy US demand help to counterbalance weakness elsewhere in the economy. This dynamic has become more muted, in our opinion, in recent years, and other growth drivers lack pent-up demand to offer a large cushion. In particular, Canadian consumers have been less robust as heavily indebted households adjust to higher interest rates. We remain cautious on the Canadian outlook and believe the probability of a BoC rate cut has increased.

For corporate bonds, we continue to be cautious on valuation across the risk continuum. We have add back some credit to the strategy given recent dovish pivot by the US and Canadian central banks, which we believe should be supportive to credit by suppressing volatility. We are focused on trying to maintain a yield advantage relative to the benchmark as a source of value add, but keeping sensitivity to spreads low in the event that risk-sentiment deteriorates. This leads us to favour credit in shorter maturities.

CERTIFICATE OF PORTFOLIO COMPLIANCE

MFS Canadian Core Plus Fixed Income Fund

To the best of my knowledge, for the quarter ending March 31, 2019, MFS Investment Management Canada Limited (“MFS”) complied in all material respects with the investment restrictions contained in the applicable Offering Memorandum or Offering Memoranda for the MFS Canadian Core Plus Fixed Income Fund. Such certification is subject to the following conditions: (i) MFS’ compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the applicable Offering Memorandum or Offering Memoranda.

MFS Investment Management Canada Limited.
